A bullet located in the interventricular septum is shown in frontal (A) and right lateral (B) chest radiography and in an echocardiogram (C; RA indicates right atrium; RV, right ventricle; LA, left atrium; and LV, left ventricle. Superior white arrow, labeled BULLET, shows the bullet located at the interventricular septum). It is from a 37-year-old policeman who was shot while on duty. The bullet entered the right hemithorax, rupturing the right free ventricular wall and ending in the interventricular septum. A right thoracotomy was performed, a hemopericardium drained, and the right ventricle repaired. The bullet was not removed. Images were made during the patient’s recovery.

Acknowledgment
We are grateful to Eduardo Guevara, MD, for performing the echocardiographic study.
A Bullet in the Heart
