Concomitant Endovascular Repair of Descending Thoracic and Abdominal Aortic Aneurysm

Yehuda G. Wolf, MD; Christopher K. Zarins, MD; Geoffrey D. Rubin, MD; Thomas J. Fogarty, MD

An 81-year-old man was referred with a 65-mm descending thoracic aneurysm (Figure 1A) and a 60-mm abdominal aortic aneurysm (Figure 1B) found on physical examination. Both aneurysms were excluded under general anesthesia, in 1 session, with AneuRx (Medtronic) stent grafts (Figure 2). The patient was discharged on the second postoperative day and has since done well for 1 year.
