ECG Challenge: January 21, 2014

A 64-year-old woman with a history of hypertension treated with a β-blocker and angiotensin-converting enzyme inhibitor presents to her primary care physician for a routine physical examination. She is asymptomatic, although she does state that she has intermittently felt her pulse and noted it to be irregular.

What is the diagnosis?

To submit your diagnosis, go to http://circ.ahajournals.org/letters/submit/circulationaha;129/3/395. The diagnosis will follow in next week’s issue (January 28).

Please go to the journal’s Facebook page for more ECG Challenges: http://goo.gl/cm4K7. Challenges are posted on Tuesdays and Responses on Wednesdays.
