A 64-year-old woman with a history of hypertension for which she is receiving therapy with a β-blocker and diltiazem (having been intolerant of an angiotensin-converting enzyme inhibitor and angiotensin receptor blocker) presents to her primary care physician for a routine physical examination. Her blood pressure is noted to be elevated (170/90 mmHg); hence, the doses of β-blocker and diltiazem are increased. She presents for a follow-up 1 week later, and her pulse is noted to be slow. An ECG is obtained.

What is the diagnosis?
To submit your diagnosis, go to http://circ.ahajournals.org/letters/submit/circulationaha;131/7/681. The diagnosis will follow in the February 24 issue.

Please go to the journal’s Facebook page for more ECG Challenges: http://goo.gl/cm4K7. Challenges are posted on Tuesdays and Responses on Wednesdays.
ECG Challenge: February 17, 2015
