A 45-year-old man with chest pain that is atypical for angina is referred for an exercise test. He exercises for almost 10 minutes and stops for fatigue. After exercise, his heart rate remains rapid for ≈6 minutes, and while he is monitored during recovery, there is an abrupt slowing of his heart rate as seen in the ECG.

What is the diagnosis?

To submit your diagnosis, go to http://circ.ahajournals.org/letters/submit/circulationaha;132/6/546. The diagnosis will follow in the August 18 issue.

Please go to the journal’s Facebook page for more ECG Challenges: http://goo.gl/cm4K7. Challenges are posted on Tuesdays and Responses on Wednesdays.
ECG Challenge: August 11, 2015
