
The author describes a high-frequency table in which the sensing element is constituted by a piezoelectric capsule connected to an electrocardiographic amplifier. The records published are those commonly obtained on high-frequency beds. A record of transverse movement of the chest is also described. The clinical applications of the high-frequency ballistocardiogram are discussed and illustrated in detail. To the book has been appended a bibliographic survey complete up to the time of publication. A well-written and attractive monograph, probably the best published in Italy so far.

Aldo Corrascio

BOOKS RECEIVED

Circulation is very glad to acknowledge the receipt of the following books. Insofar as space permits, as many appropriate books as possible will be reviewed.
