be accurately reproduced with proper orientation of the wire model with respect to the direction of the rays of light. These results, in connection with leads where one electrode is close to the heart, are of considerable interest, since they suggest that the theory of an equivalent dipole within the heart is valid for semidirect as well as for limb leads and may make the spatial vectorcardiogram of great theoretic and practical value.

The monograph is well written, and the figures and illustrations are excellent. Anyone interested in the vectorcardiogram should be familiar with this work.

F. D. Johnston

---

ANNUAL MEETING

The Annual Meeting and Twenty-Fourth Scientific Sessions of the American Heart Association will be held at the Chalfonte-Haddon Hall Hotel, Atlantic City, New Jersey, June 7–10, 1951. All those desiring to attend should make room reservations directly with hotels in Atlantic City at the earliest possible date. Those who wish to present papers at the Scientific Sessions should submit abstracts in triplicate, not exceeding 300 words, to E. Cowles Andrus, M.D., 24 E. Eager St., Baltimore, Md. The abstracts should be sent in no later than February 10, 1951.

ASSOCIATION FOR ADVANCEMENT
OF SCIENCE

The 117th Meeting of the American Association for the Advancement of Science will be held in Cleveland, December 26–30, 1950. In conjunction with the meeting, the Annual Science Exposition will be held in the Arena of Cleveland's Public Auditorium. Detailed information concerning the various sectional programs may be obtained by writing to Raymond L. Taylor, Assistant Administrative Secretary of the Association, 1515 Massachusetts Avenue, N.W., Washington, D. C.

ASSOCIATION OF MILITARY
SURGEONS

The 1950 Convention of the Association of Military Surgeons of the United States will be held November 9–11 at the Hotel Statler, New York. The program will deal with the defense role of the physician, rehabilitation, military medicine, and surgery. Papers related to cardiovascular disease will be presented by Dr. Irving S. Wright, Professor of Clinical Medicine, Cornell University Medical College, New York, and by Dr. William D. Stroud, Professor of Cardiology, University of Pennsylvania Graduate School of Medicine, and Past President of the American Heart Association.
Changes in fundus in degenerative vascular disease associated with arteriosclerosis, hypertension and diabetes mellitus.

Tortuous veins and arteries, with the latter varying in caliber, are part of the fundus findings of arteriosclerosis and hypertension.

White areas of exudation are seen. Hemorrhagic areas are also present in this fundus, and may be associated with generalized arteriosclerosis, hypertension and diabetes mellitus.

... acts to preserve the integrity of the capillaries—particularly useful for prevention and treatment of capillary fragility in hypertension, arteriosclerosis and diabetes mellitus.

Coronary Circulation in Health and Disease

By DONALD E. GREGG, M.S., Ph.D., M.D.
Chief Research Physician, Medical Department, Field Research Laboratory, Fort Knox, Kentucky

Foreword by CARL J. WIGGERS, M.D.

Available records indicate that at least two-thirds of all heart diseases and heart failures arise from a relative or absolute failure of coronary circulation. This book crystallizes present-day thinking regarding the subject. It brings up to date the many notable advances which have resulted from clinical and experimental investigations conducted throughout the medical world, and interprets them for practicing physicians, internists and physiologists. Specialists in heart diseases will find this book to be one of the most useful reference works to be published on the subject. It is based on more than 15 years of experimental work by Dr. Gregg.

A full consideration of the problem as it currently exists is given first, followed by a discussion of the morphological aspects. Experimental approaches to the study of the coronary circulation are considered extensively, including preparations used, determination and registration of mean and phasic cardiac pressures, coronary blood flow and flow determinants, the metabolism and work of the myocardium, basic controlling mechanisms, and physiological responses.

Special attention is given to the peculiarities of the coronary circulation and to other important experimental findings, such as the functioning of distribution channels for coronary inflow and especially outflow, interpretation of phasic flow and pressure curves, the intimate action of drugs, etc. An entire chapter is devoted to The Coronary Circulation in Heart Disease and Heart Failure, with emphasis on atheromatous lesions in man.

Throughout this work, Dr. Gregg has effectively supplied the foundation of the many pertinent principles which form the focal point of all intelligent practice.

A Boon to the Practicing Internist

DIFFERENTIAL DIAGNOSIS OF INTERNAL DISEASES
Clinical Analysis and Synthesis of Symptoms and Signs
By JULIUS BAUER, M.D.
Clinical Professor of Medicine, College of Medical Evangelists, Los Angeles; Senior Attending Physician, Los Angeles County Hospital; Consultant in Medicine, White Memorial Hospital, Los Angeles.

Dr. Bauer writes in terms of the physician; he aims at thorough understanding of the sick person. The use of diagnostic tables, the "scientific" labelling of a case, can never replace a careful analysis of the pathophysiological mechanism that might account for the clinical picture. Dr. Bauer proceeds to disentangle the elements of psychosomatic conditions and illustrates how frequent and complex they are by including nearly two hundred "histories." Beyond that, an internist must expect that about one third of his patients suffer from pure neurosis or psychoneurosis. He cannot refer all of these patients to a psychiatrist. The internist's diagnosis therefore merges almost imperceptibly with minor psychotherapy.

A Fundamental Contribution to Medical Knowledge

PERSPECTIVES IN HUMAN MALNUTRITION
A Contribution to the Biology of Disease from a Clinical and Pathological Study of Chronic Malnutrition and Pellagra in the African

By JOSEPH GILLMAN, D.Sc., M.B., B.Ch. and THEODORE GILLMAN, M.Sc., M.B., B.Ch.
University of the Witwatersrand Medical School, Johannesburg, South Africa.

Extensive clinical investigations lead the authors to the conclusion that disorders of nutrition cannot be considered as mere aberrations (due to the absence of one or the other dietary factor) but must be understood as a total disorder of the entire body organism. They define pellagra as a particular variety of malnutrition. They then investigate the pathogeneses of the various body changes in malnutrition and specifically in pellagra, devoting chapters to each of the organs of the body. They demonstrate extensively the actual pathological changes and correlate these with the clinical status of the patient. Sections on treatment are included. A separate chapter is given over to nutritional edema.

Large double-column format — 640 pages — 50 tables — 260 illustrations
bibliography — index — $15.00

the oral route is the simplest

For maintaining the edema-free state, here—at last—is truly effective oral mercurial diuretic therapy. One or two Tablets MERCUHYDRIN® with Ascorbic Acid daily (more when indicated) generally controls cardiac edema with

greater convenience  greater economy  greater safety

After parenteral therapy, your patient has been brought to unfluctuating basic weight. Then systematic oral therapy employing Tablets MERCUHYDRIN (brand of meralluride) with Ascorbic Acid may eliminate the need for injections entirely in mild decompensation. In more advanced cases, you can greatly reduce the number of injections required to maintain your patients free of edema.

Prolongation of the interval between injections simplifies management. The diuretic response is good, the tablets are well tolerated, the method is convenient, and the economy considerable.

Packaging: Tablets MERCUHYDRIN with Ascorbic Acid, available in bottles of 100 tablets. Each tablet contains meralluride 60 mg. (equivalent to 19.5 mg. mercury) and ascorbic acid 100 mg.
